The explanations for material variances of the Municipality's actual financial performance with that budgeted is set out in Appendix E.1 $\,$

Accounting Policies

1. Presentation of Annual Financial Statements

The annual financial statements have been prepared in accordance with the Standards of Generally Recognised Accounting Practices (GRAP) prescribed by the Minister of Finance in terms of General Notice 991 and 992 of 2005. These annual financial statements have been prepared on an accrual basis of accounting and are in accordance with historical cost convention unless specified otherwise.

A summary of the significant accounting policies, which have been consistently applied, are disclosed below.

These accounting policies are consistent with the previous period.

1.1 Significant judgments and sources of estimation uncertainty

In preparing the annual financial statements, management is required to make estimates and assumptions that affect the amounts represented in the annual financial statements and related disclosures. Use of available information and the application of judgment is inherent in the formation of estimates. Actual results in the future could differ from these estimates which may be material to the annual financial statements. Significant judgments include:

Trade receivables / Held to maturity investments and/or loans and receivables

The municipality assesses its loans and receivables for impairment at each statement of statement of financial performance, the municipality makes judgments as to whether there is observable data indicating a measurable decrease in the estimated future cash flows from a financial asset/liability.

The impairment for loans and receivables is calculated on a portfolio basis, based on historical loss ratios, adjusted for national and industry-specific economic conditions and other indicators present at the reporting date that correlate with defaults on the portfolio. These annual loss ratios are applied to loan balances in the portfolio and scaled to the estimated loss emergence period.

Allowance for slow moving, damaged and obsolete stock

An allowance for stock to write stock down to the lower of cost or net realisable value Management have made estimates of the selling price and direct cost to sell on certain inventory items.

The write down is included in the impairment of assets note.

Fair value estimation

The fair value of financial instruments traded in active markets (such as trading and available-for-sale securities) is based on quoted market prices at the statement of financial

position date. The quoted market price used for financial assets held by the municipality is the current bid price. The carrying value less impairment provision of trade receivables and payables are assumed to approximate their fair values. The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the prime interest rate that is available to the municipality for similar financial instruments.

Impairment testing

The municipality reviews and tests the carrying value of assets when events or changes in circumstances suggest that the carrying amount may not be recoverable.

The municipality has identified all its capital assets, excluding Investment Property, as non-cash generating assets as it's the municipality's view that the primary objective of these assets are to provide a service and not to generate a commercial return.

Provisions

Provisions were raised and management determined an estimate based on the information available. Additional disclosure of these estimates of provisions is included in note 36 - Provisions.

Useful lives of assets

The municipality's management determines the estimated useful lives and related depreciation charges. Management will increase the depreciation charge where useful lives are less than previously estimated useful lives.

Post-retirement benefits

The present value of the post retirement obligation depends on a number of factors that are determined on an actuarial basis using a number of assumptions. The assumptions used in determining the net cost (income) include the discount rate. Any changes in these assumptions will impact on the carrying amount of post retirement obligations.

The municipality determines the appropriate discount rate at the end of each year. This is the interest rate that should be used to determine the present value of estimated future cash outflows expected to be required to settle the pension obligations. In determining the appropriate discount rate, the municipality considers the interest rates of high-quality corporate bonds that are denominated in the currency in which the benefits will be paid, and that have terms to maturity approximating the terms of the related pension liability. Other key assumptions for pension obligations are based on current market conditions. Additional information is disclosed in Note 46.

Effective interest rate

The municipality used the prime interest rate to discount future cash flows.

Allowance for doubtful debts

An impairment loss is recognised in surplus and deficit when there is objective evidence that is irrecoverable. The impairment is measured as the difference between the debtors carrying amount and the present value of estimated future cash flows discounted at the effective interest rate, computed at initial recognition.

1.2 Presentation of Currency

These annual financial statements are presented in South African Rand which is the functional currency of the municipality.

1.3 Going concern assumption

In terms of the accounting standard GRAP 1 paragraphs 27 to 30 the annual financial statements are prepared on a going concern basis. The assumption is based on the fact that the municipality may invoke its power to levy additional rates or taxes to enable the municipality to be considered as a going concern even though the municipality will be operational for extended periods with negative net assets.

However based on the current solvency and liquidity ratio's tests performed, the municipality's ability to operate as a going concern is under threat.

1.4.1 Housing development fund

The Housing Development Fund was established in terms of the Housing Act, (Act No. 107 of 1997). Loans from national and provincial government used to finance housing selling schemes undertaken by the municipality were terminated on 1 April 1998 and transferred to a Housing Development Fund. Housing selling scheme, both complete and in progress as at 1 April 1998, were also transferred to the Housing Development Fund. In terms of the Housing Act, all proceeds from housing developments, which include rental income and sales of houses, must be paid into the Housing Development Fund. Monies standing to the credit of the Housing Development Fund can be used only to finance housing developments

within the municipal area subject to the approval of the Provincial MEC responsible for housing.

1.4.2 Revaluation Reserve

The surplus arising from the revaluation of land and buildings is credited to a revaluation reserve. The revaluation surplus is realised as re-valued buildings are depreciated, through a transfer from the revaluation reserve to the accumulated surplus/(deficit). On disposal, the net revaluation surplus is transferred to the accumulated surplus/(deficit) while gains or losses on disposal, based on re-valued amounts, are credited or charged to the Statement of Financial Performance.

1.5 Investment property

Initial Recognition:

Investment property includes property (land or a building, or part of a building, or both land or buildings held under a finance lease) held to earn rentals and/or for capital appreciation, rather than held to meet service delivery objectives, the production or supply of goods or services, or the sale of an asset in the ordinary course of operations. At initial recognition, the Municipality measures investment property at cost including transaction costs once it meets the definition of investment property. However, where an investment property was acquired through a non-exchange transaction (i.e. where it acquired the investment property for no or a nominal value), its cost is its fair value as at the date of acquisition. The cost of self-constructed investment property is the cost at date of completion

Subsequent Measurement:

Investment property is measured at fair value. After initial recognition all investment property is measured at fair value at each Statement of financial position date. No depreciation is calculated on these properties.

1.6 Property, plant and equipment

1.6.1 Initial recognition

Property, plant and equipment are tangible non-current assets (including infrastructure assets) that are held for use in the production or supply of goods or services, rental to others, or for administrative purposes, and are expected to be used during more than one period.

The cost of an item of property, plant and equipment is recognised as an asset when:

- → it is probable that future economic benefits or service potential associated with the item will flow to the municipality; and
- → the cost of the item can be measured reliably

Property, plant and equipment is initially measured at cost. The cost of an item of property, plant and equipment is the purchase price and other costs attributable to bring the asset to the location and condition necessary for it to be capable of operating in the manner intended by management. Trade discounts and rebates are deducted in arriving at the cost.

The cost also includes the necessary costs of dismantling and removing the asset and restoring the site on which it is located.

Where an asset is acquired at no cost, or for a nominal cost, its cost is its fair value as at date of acquisition. Where an item of property, plant and equipment is acquired in exchange for a non-monetary asset or monetary assets, or a combination of monetary and non-monetary assets, the asset acquired is initially measured at fair value (the cost). If the acquired item's fair value was not determinable, it's deemed cost is the carrying amount of the asset(s) given up.

When significant components of an item of property, plant and equipment have different useful lives, they are accounted for as separate items (major components) of property, plant and equipment.

Costs include costs incurred initially to acquire or construct an item of property, plant and equipment and costs incurred subsequently to add to, replace part of, or service it. If a replacement cost is recognised in the carrying amount of an item of property, plant and equipment, the carrying amount of the replaced part is derecognised.

Recognition of costs in the carrying amount of an item of property, plant and equipment ceases when the item is in the location and condition necessary for it to be capable of operating in the manner intended by management.

Major spare parts and stand by equipment which are expected to be used for more than one period are included in property, plant and equipment. In addition, spare parts and stand by equipment which can only be used in connection with an item of property, plant and equipment are accounted for as property, plant and equipment.

Major inspection costs which are a condition of continuing use of an item of property, plant and equipment and which meet the recognition criteria above are included as a replacement in the cost of the item of property, plant and equipment. Any remaining inspection costs from the previous inspection are derecognised.

Property, plant and equipment is carried at cost less accumulated depreciation and any impairment losses.

1.6.2 Subsequent recognition

Subsequent to initial recognition, items of property, plant and equipment are measured at cost less accumulated depreciation and impairment losses excluding land and buildings. B392 Land is not depreciated as it is deemed to have an indefinite useful life.

When an item of property, plant and equipment is re-valued, any accumulated depreciation at the date of the revaluation is restated proportionately with the change in the gross carrying amount of the asset so that the carrying amount of the asset after re-valuation equals its revalued amount.

Any increase in an asset's carrying amount, as a result of a revaluation, is credited directly to a re-valuation surplus. The increase is recognised in surplus or deficit to the extent that it reverses a revaluation decrease of the same asset previously recognised in surplus or deficit.

Any decrease in an asset's carrying amount, as a result of a revaluation, is recognised in surplus or deficit in the current period. The decrease is debited directly to a revaluation surplus to the extent of any credit balance existing in the revaluation surplus in respect of that asset. The revaluation surplus in equity related to a specific item of property, plant and equipment is transferred directly to retained earnings when the asset is derecognised.

The revaluation surplus in equity related to a specific item of property, plant and equipment is transferred directly to retained earnings as the asset is used. The amount transferred is equal to the difference between depreciation based on the re-valued carrying amount and depreciation based on the original cost of the asset.

1.6.3 Depreciation

Property, plant and equipment are depreciated on the straight line basis over their expected useful lives to their estimated residual value. Property, plant and equipment is carried at cost less accumulated depreciation and any impaired costs.

The useful lives of items of property, plant and equipment have been assessed as follows:-

Item Average useful life

Infrastructure

\rightarrow Roads and paving	30 years
\rightarrow Pedestrian malls	5 years
→ Electricity	20-30 years
→ Sewerage	15-20 years
→ Water	15-20 years
\rightarrow Housing	30 years

\rightarrow Refuse sites	15 years
Community	
 → Recreational facilities → Cemeteries → Halls → Libraries → Parks and gardens → Fire services → Clinics → Sport fields → Stadium 	20 - 30 years 30 years 30 years 30 years 10 - 30 years 30 years 20 - 30 years 20 - 30 years 30 years
Other → Motor vehicles → Plant and equipment → Security measures → Buildings → Specialised vehicles → IT equipment → Office equipment → Library books	5 years 2-15 years 3-10 years 30 years 10 years 3-5 years 3-7 years 10 years

Land is not depreciated as it is regarded as having an infinite useful life.

The residual value, useful life and depreciation method of each asset are reviewed at the end of each reporting date. If the expectations differ from previous estimates, the change is accounted for as a change in accounting estimate. Each part of an item of property, plant and equipment with a cost that is significant in relation to the total cost of the item is depreciated separately.

The depreciation charge for each period is recognised in surplus or deficit unless it is included in the carrying amount of another asset.

1.6.4 De-recognition

Items of property, plant and equipment are derecognised when the asset is disposed of or when there are no further economic benefits or service potential expected from the use of the asset.

The gain or loss arising from the de-recognition of an item of Intangible assets is included in surplus or deficit when the items derecognised. The gain or loss arising from the de-recognition of an item of property, plant and equipment is determined as the difference between the net disposal proceeds, if any, and the carrying amount of the item.

Assets which the municipality holds for rentals to others and subsequently routinely sell as part of the ordinary course of activities are transferred to inventories when the rentals end and the assets are available-for-sale. These assets are not accounted for as non-current assets held for sale. Proceeds from sales of these assets are recognised as revenue. All cash flows on these assets are included in cash flows from operating activities in the cash flow statement.

1.7 Biological Assets

Initial Recognition

A biological asset or agricultural produce is recognised when, and only when:

- \rightarrow the municipality controls the asset as a result of past events;
- → it is probable that future economic benefits associated with the asset will flow to the municipality
- \rightarrow and the fair value or cost of the asset can be measured reliably.

Subsequent Measurement:

Biological assets are measured at their fair value less estimated point-of-sale costs.

The fair value of livestock is determined based on market prices of livestock of similar age, breed, and genetic merit. The fair value of milk is determined based on market prices in the local area. The fair value of the vine / pine plantations is based on the combined fair value of the land and the vines / pine trees. The fair value of the raw land and land improvements is then deducted from the combined fair value to determine the fair value of the vines / pine trees.

A gain or loss arising on initial recognition of agricultural produce at fair value less estimated point-of-sale costs is included in profit or loss for the period in which it arises.

Where market determined prices or values are not available, the present value of the expected net cash inflows from the asset, discounted at a current market-determined pre-tax rate is used to determine fair value.

An unconditional government grant related to a biological asset measured at its fair value less estimated point-of-sale costs is recognised as income when the government grant becomes receivable.

Where fair value cannot be measured reliably, biological assets are measured at cost less any accumulated depreciation and any accumulated impairment losses.

Depreciation is provided on biological assets where fair value cannot be determined, to write down the cost, less residual value. The annual depreciation rates are based on the following estimated average asset lives:

1.8 Heritage Assets

Recognition of Assets

Heritage assets are assets that have a cultural, environmental, historical, natural, scientific, technological or artistic significance and are held indefinitely for the benefit of present and future generations.

A heritage asset is further recognised as an asset only if:

- → it is probable that future economic benefits or service potential associated with the asset will to the municipality; and
- \rightarrow the cost of fair value of the asset can be measured reliably.

Subsequent Measurement

Heritage asset is measured at its cost value and should it be acquired through a non-exchange transaction will it be measured at its fair value as at the date of acquisition and is carried at its cost less any accumulated impairment losses. In instances where cost is not determinable, the municipality has taken advantage of the transitional provisions.

Heritage assets which are shown at cost, are not depreciated due to the uncertainty regarding their estimated useful lives, as reflected below:

Memorials & Statues	 indefinite life
Heritage Sites	- indefinite life
Museums	- indefinite life
Art Works	- indefinite life

Although a heritage asset is not depreciated, the asset is assessed for impairment at each reporting date to disclose whether there is an indication that it may be impaired.

De-recognition of Asset

The carrying amount of a heritage is de-recognised:

→ on disposal, or

→ when no future economic benefits or service potential are expected from its use or disposal.

The gain or loss arising from the de-recognition, of a heritage asset should be determined as the difference between the net disposal proceeds, if any, and the carrying amount of the heritage asset. Such difference is recognised in surplus or deficit when the heritage asset is derecognised.

1.9 Investment Property

Initial recognition and measurement

Investment property includes property held to earn rentals and/or for capital appreciation, rather than held to meet service delivery objectives, the production or supply of goods or services or the sale of an asset in the ordinary course of operations.

Investment Property is initially recognised when future economic benefits or service potential are probable and the cost or fair value can be determined reliably.

At initial recognition, the entity measures investment property at cost including transaction costs once it meets the definition of investment property.

Where an investment property was acquired through a non-exchange transaction (i.e. where it acquired the investment property for no or a nominal value), its cost is its fair value as at the date of acquisition.

The cost of self-constructed investment property is the cost at date of completion.

Transfers are made to or from investment property only when there is a change in use. For a transfer from investment property to owner occupied property (property, plant and equipment), the deemed cost for subsequent accounting is the fair value at the date of change in use. If owner occupied property becomes an investment property, the entity accounts for such property in accordance with the policy stated under property, plant and equipment up to the date of change in use.

The cost of day to day servicing of investment property is recognised in the Statement of Financial Performance as incurred.

Subsequent measurement Fair value model

Investment property is measured using the fair value model. This entails determining the fair value of investment properties on a regular basis. To the extent that the fair value model is applied investment property is not depreciated. Fair value gains / losses that result from the revaluation are recognised in the Statement of Financial Performance.

Impairments

The entity tests for impairment where there is an indication that an asset may be impaired. An assessment of whether there is an indication of possible impairment is done at each reporting date. Where the carrying amount of an Investment Property is greater than the estimated recoverable amount, it is written down immediately to its recoverable amount and an impairment loss is charged to the Statement of Financial Performance

An impairment is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined had no impairment been recognised. A reversal of the impairment is recognised in the Statement of Financial Performance

Derecognition

An Investment Property is derecognised when there is a disposal or no future economic benefits or service potential are to be derived from the property. All gains or losses, which result from the derecognition, are recognised in the Statement of Financial Performance.

1.10 Inventories

Inventories are initially measured at cost except where inventories are acquired at no cost, or for nominal consideration, then their costs are their fair valued as at the date of acquisition.

Inventories are measured at the lower of cost and net realisable value.

The cost at reporting date comprises of all costs of purchase, costs of conversion and other costs incurred in bringing the inventories to their present location and condition. The cost of inventories is assigned using the weighted average method. The same cost formula is used for all inventories having a similar nature and use to the entity. When inventories are sold, the carrying amount of those inventories is recognised as an expense in the period in which the related revenue is recognised. The amount of any writedown of inventories to net realisable value and all losses of inventories are recognised as an expense in the period the write-down or loss occurs. The amount of any reversal of any write-down of inventories, arising from an increase in net realisable value, are recognised as a reduction in the amount of inventories recognised as an expense in the period in which the related revenues in the period in which the reverse is net realisable value, are recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reverse is recognised as an expense in the period in which the related revenues in the period in which the reverse is net realisable value and all losses of inventories are recognised as a reduction in the amount of inventories recognised as an expense in the period in which the reverse of inventories are recognised as an expense in the period in which the reverse of inventories recognised as an expense in the period in which the reverse of inventories recognised as an expense in the period in which the reverse occurs.

Redundant and slow-moving inventories are identified and written down from cost to net realisable value with regard to their estimated economic or realisable values.

Unsold properties are at the lower cost and net realisable value. Direct cost are accumulated for each separately identifiable development. Cost also includes a portion of the overhead costs.

1.11 Financial instruments

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or a residual interest of another entity. The amortised cost of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured at initial recognition minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between that initial amount and the maturity amount, and minus any reduction (directly or through the use of an allowance account) for impairment or un-collectability.

A concessionary loan is a loan granted to or received by an entity on terms that are not market related. Credit risk is the risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

De-recognition is the removal of a previously recognised financial asset or financial liability from an entity's statement of financial position. The effective interest method is a method of calculating the amortised cost of a financial asset or a financial liability (or group of financial assets or financial liabilities) and of allocating the interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, an entity shall estimate cash flows considering all contractual terms of the financial instrument (for example, prepayment,

call and similar options) but shall not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, (see the Standard of GRAP on Revenue from Exchange Transactions) transaction costs, and all other premiums or discounts. There is a presumption that the cash flows and the expected life of a group of similar financial instruments can be estimated reliably. However, in those rare cases when it is not possible to reliably estimate the cash flows or the expected life of a financial instrument (or group of financial instruments), the entity shall use the contractual cash flows over the full contractual term of the financial instrument (or group of financial instruments).

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable willing parties in an arm's length transaction.

A financial asset is:

 \rightarrow cash;

 \rightarrow a residual interest of another entity; or

\rightarrow a contractual right to:

- \rightarrow receive cash or another financial asset from another entity; or
- → exchange financial assets or financial liabilities with another entity under conditions that are potentially favourable to the entity.

A financial guarantee contract is a contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.

A financial liability is any liability that is a contractual obligation to:

- \rightarrow deliver cash or another financial asset to another entity; or
- → exchange financial assets or financial liabilities under conditions that are potentially unfavourable to the entity.

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

Liquidity risk is the risk encountered by an entity in the event of difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset. Loan commitment is a firm commitment to provide credit under pre-specified terms and conditions.

Loans payable are financial liabilities, other than short-term payables on normal credit terms.

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and other price risk. Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in

market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.

A financial asset is past due when a counterparty has failed to make a payment when contractually due. Transaction costs are incremental costs that are directly attributable to the acquisition, issue or disposal of a financial asset or financial liability. An incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument.

Financial instruments at amortised cost are non-derivative financial assets or non-derivative financial liabilities that have fixed or determinable payments, excluding those instruments that: \rightarrow the entity designates at fair value at initial recognition; or \rightarrow are held for trading.

Financial instruments at cost are investments in residual interests that do not have a quoted market price in an active market, and whose fair value cannot be reliably measured.

Financial instruments at fair value comprise financial assets or financial liabilities that are:

- → derivatives;
- \rightarrow combined instruments that are designated at fair value;
- \rightarrow instruments held for trading. A financial instrument is held for trading if:
- → it is acquired or incurred principally for the purpose of selling or repurchasing it in the near-term; or
- → on initial recognition it is part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short term profit-taking;
- → non-derivative financial assets or financial liabilities with fixed or determinable payments that are designated at fair value at initial recognition; and
- → financial instruments that do not meet the definition of financial instruments at amortised cost or financial instruments at cost.

Classification

The municipality has the following types of financial assets (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class Category

Cash and cash equivalents Financial asset measured at amortised cost Trade and other receivables from non-exchange transactions Financial asset measured at amortised cost Trade and other receivables from exchange transactions Financial asset measured at amortised cost

Long term receivables Financial asset measured at amortised cost

The municipality has the following types of financial liabilities (classes and category) as reflected on the face of the statement of financial position or in the notes thereto:

Class Category

Long term liabilities Financial liability measured at amortised cost

Trade and other payables Financial liability measured at amortised cost

Initial recognition

The entity recognises a financial asset or a financial liability in its statement of financial position when the entity becomes a party to the contractual provisions of the instrument. The entity recognises financial assets using trade date accounting.

Initial measurement of financial assets and financial liabilities

The entity measures a financial asset and financial liability initially at its fair value plus transaction costs that are directly attributable to the acquisition or issue of the financial asset or financial liability. The entity first assesses whether the substance of a concessionary its loan is in fact a loan. On initial recognition, the entity analyses a concessionary loan into its component parts and accounts for each component separately.

The entity accounts for that part of a concessionary loan that is:

- → a social benefit in accordance with the Framework for the Preparation and Presentation of Financial Statements, where it is the issuer of the loan; or
- → non-exchange revenue, in accordance with the Standard of GRAP on Revenue from Non exchange Transactions (Taxes and Transfers), where it is the recipient of the Ioan.

Subsequent measurement of financial assets and financial liabilities

The entity measures all financial assets and financial liabilities after initial recognition using the following categories:

- \rightarrow Financial instruments at fair value.
- \rightarrow Financial instruments at amortised cost.
- \rightarrow Financial instruments at cost.

All financial assets measured at amortised cost, or cost, are subject to an impairment review.

Fair value measurement considerations

The best evidence of fair value is quoted prices in an active market. If the market for a financial instrument is not active, the entity establishes fair value by using a valuation

technique. The objective of using a valuation technique is to establish what the transaction price would have been on the measurement date in an arm's length exchange motivated by normal operating considerations. Valuation techniques include using recent arm's length market transactions between knowledgeable, willing parties, if available, reference to the current fair value of another instrument that is substantially the same, discounted cash flow

analysis and option pricing models. If there is a valuation technique commonly used by market participants to price the instrument and that technique has been demonstrated to provide reliable estimates of prices obtained in actual market transactions, the entity uses that technique. The chosen valuation technique makes maximum use of market inputs and relies as little as possible on entity-specific inputs. It incorporates all factors that market participants would consider in setting a price and is consistent with accepted economic methodologies for pricing financial instruments. Periodically, an entity calibrates the valuation technique and tests it for validity using prices from any observable current market transactions in the same instrument (i.e. without modification or repackaging) or based on any available observable market data. The fair value of a financial liability with a demand feature (e.g. a demand deposit) is not less than the amount payable on demand, discounted from the first date that the amount could be required to be paid.

Reclassification

The entity does not reclassify a financial instrument while it is issued or held unless it is:

 \rightarrow combined instrument that is required to be measured at fair value; or \rightarrow an investment in a residual interest that meets the requirements for reclassification.

Where the entity cannot reliably measure the fair value of an embedded derivative that has been separated from a host contract that is a financial instrument at a subsequent reporting date, it measures the combined instrument at fair value.

This requires a reclassification of the instrument from amortised cost or cost to fair value. If fair value can no longer be measured reliably for an investment in a residual interest measured at fair value, the entity reclassifies the investment from fair value to cost. The carrying amount at the date that fair value is no longer available becomes the cost.

If a reliable measure becomes available for an investment in a residual interest for which a measure was previously not available, and the instrument would have been required to be measured at fair value, the entity reclassifies the instrument from cost to fair value.

Gains and losses

A gain or loss arising from a change in the fair value of a financial asset or financial liability measured at fair value is recognised in surplus or deficit. For financial assets and financial liabilities measured at amortised cost or cost, a gain or loss is recognised in surplus or deficit when the financial asset or financial liability is derecognised or impaired, or through the amortisation process.

Impairment and un-collectability of financial assets

The entity assess at the end of each reporting period whether there is any objective evidence that a financial asset or group of financial assets is impaired.

Financial assets measured at amortised cost:

If there is objective evidence that an impairment loss on financial assets measured at amortised cost has been incurred, the amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced directly OR through the use of an allowance account. The amount of the loss is recognised in surplus or deficit.

If, in a subsequent period, the amount of the impairment loss decreases and the decrease can be related objectively to an event occurring after the impairment was recognised, the previously recognised impairment loss is reversed directly OR by adjusting an allowance account. The reversal does not result in a carrying amount of the financial asset that exceeds what the amortised cost would have been had the impairment not been recognised at the date the impairment is reversed. The amount of the reversal is recognised in surplus or deficit.

Financial assets measured at cost

If there is objective evidence that an impairment loss has been incurred on an investment in a residual interest that is not measured at fair value because its fair value cannot be measured reliably, the amount of the impairment loss is measured as the difference between the carrying amount of the financial asset and the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset. Such impairment losses are not reversed.

De-recognition

Financial assets

The entity derecognises financial assets using trade date accounting.

The entity derecognises a financial asset only when:

- → the contractual rights to the cash flows from the financial asset expire, are settled or waived;
- → the entity transfers to another party substantially all of the risks and rewards of ownership of the financial asset; or
- → the entity, despite having retained some significant risks and rewards of ownership of the financial asset, has transferred control of the asset to another party and the other party has the practical ability to sell the asset in its entirety to an unrelated third party, and is able to exercise that ability unilaterally and without needing to impose additional restrictions on the transfer. In this case, the entity derecognise the asset and recognise separately any rights and obligations created or retained in the transfer.

The carrying amounts of the transferred asset are allocated between the rights or obligations retained and those transferred on the basis of their relative fair values at the transfer date. Newly created rights and obligations are measured at their fair values at that date. Any difference between the consideration received and the amounts recognised and derecognised is recognised in surplus or deficit in the period of the transfer.

If the entity transfers a financial asset in a transfer that qualifies for de-recognition in its entirety and retains the right to service the financial asset for a fee, it recognise either a servicing asset or a servicing liability for that servicing contract. If the fee to be received is not expected to compensate the entity adequately for performing the servicing, a servicing liability for the servicing obligation is recognised at its fair value. If the fee to be received is expected to be more than adequate compensation for the servicing, a servicing asset is recognised for the servicing right at an amount determined on the basis of an allocation of the carrying amount of the larger financial asset.

If, as a result of a transfer, a financial asset is derecognised in its entirety but the transfer results in the entity obtaining a new financial asset or assuming a new financial liability, or a servicing liability, the entity recognise the new financial asset, financial liability or servicing liability at fair value.

On de-recognition of a financial asset in its entirety, the difference between the carrying amount and the sum of the consideration received is recognised in surplus or deficit. If the transferred asset is part of a larger financial asset and the part transferred qualifies for de-recognition in its entirety, the previous carrying amount of the larger financial asset is allocated between the part that continues to be recognised and the part that is derecognised, based on the relative fair values of those parts, on the date of the transfer. For this purpose, a retained servicing asset is treated as a part that continues to be recognised and the sum of the consideration received for the part derecognised is recognised in surplus or deficit.

If a transfer does not result in de-recognition because the entity has retained substantially all the risks and rewards of ownership of the transferred asset, the entity continue to recognise the transferred asset in its entirety and recognise a financial liability for the consideration received. In subsequent periods, the entity recognises any revenue on the transferred asset and any expense incurred on the financial liability. Neither the asset, and the associated liability nor the revenue, and the associated expenses are offset.

Financial liabilities

The entity removes a financial liability (or a part of a financial liability) from its statement of financial position when it is extinguished i.e. when the obligation specified in the contract is discharged, cancelled, expires or waived.

An exchange between an existing borrower and lender of debt instruments with substantially different terms is accounted for as having extinguished the original financial liability and a new financial liability is recognised. Similarly, a substantial modification of the terms of an existing financial liability or a part of it is accounted for as having extinguished the original financial liability and having recognised a new financial liability.

The difference between the carrying amount of a financial liability (or part of a financial liability) extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in surplus or deficit. Any liabilities that are waived, forgiven or assumed by another entity by way of a non-exchange transaction are accounted for in accordance with the Standard of GRAP on Revenue from Non-exchange Transactions (Taxes and Transfers).

Presentation

Interest relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

Dividends or similar distributions relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit. Losses and gains relating to a financial instrument or a component that is a financial liability is recognised as revenue or expense in surplus or deficit.

Distributions to holders of residual interests are debited by the entity directly to net assets, net of any related income tax benefit [where applicable]. Transaction costs incurred on residual interests is accounted for as a deduction from net assets, net of any related income tax benefit [where applicable].

A financial asset and a financial liability are only offset and the net amount presented in the statement of financial position when the entity currently has a legally enforceable right to set off the recognised amounts and intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. In accounting for a transfer of a financial asset that does not qualify for de-recognition, the entity does not offset the transferred asset and the associated liability.

1.12 Revenue from exchange transactions

Revenue is the gross inflow of economic benefits or service potential during the reporting period when those inflows result in an increase in net assets, other than increases relating to contributions from owners.

An exchange transaction is one in which the municipality receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of goods, services or use of assets) to the other party in exchange.

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction.

Measurement

Revenue is measured at the fair value of the consideration received or receivable, net of trade discounts and volume rebates.

Sale of goods

Revenue from the sale of goods is recognised when all the following conditions have been satisfied:

 \rightarrow the municipality has transferred to the purchaser the significant risks and rewards of

ownership of the goods;

- → the municipality retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold; the amount of revenue can be measured reliably;
- → it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality; and
- \rightarrow the costs incurred or to be incurred in respect of the transaction can be measured reliably.

Rendering of services

When the outcome of a transaction involving the rendering of services can be estimated reliably, revenue associated with the transaction is recognised by reference to the stage of completion of the transaction at the reporting date. The outcome of a transaction can be estimated reliably when all the following conditions are satisfied:

- \rightarrow the amount of revenue can be measured reliably;
- → it is probable that the economic benefits or service potential associated with the transaction will flow to the municipality;
- → the stage of completion of the transaction at the reporting date can be measured reliably; and
- → the costs incurred for the transaction and the costs to complete the transaction can be measured reliably.

When services are performed by an indeterminate number of acts over a specified time frame, revenue is recognised on a straight line basis over the specified time frame unless there is evidence that some other method better represents the stage of completion. When a specific act is much more significant than any other acts, the recognition of revenue is postponed until the significant act is executed.

When the outcome of the transaction involving the rendering of services cannot be estimated reliably, revenue is recognised only to the extent of the expenses recognised that are recoverable. Service revenue is recognised by reference to the stage of completion of the transaction at the reporting date. Stage of completion is determined by.

Interest, royalties and dividends

Revenue arising from the use by others of entity assets yielding interest, royalties and dividends is recognised when:

- → It is probable that the economic benefits or service potential associated with the transaction will flow to the municipality, and
- \rightarrow The amount of the revenue can be measured reliably.

Interest is recognised, in surplus or deficit, using the effective interest rate method. Royalties are recognised as they are earned in accordance with the substance of the relevant agreements.

Dividends, or their equivalents are recognised, in surplus or deficit, when the municipality's right to receive payment has been established.

Service fees included in the price of the product are recognised as revenue over the period during which the service is performed.

1.13 Revenue from non-exchange transactions

Revenue comprises gross inflows of economic benefits or service potential received and receivable by a municipality, which represents an increase in net assets, other than increases relating to contributions from owners.

Conditions on transferred assets are stipulations that specify that the future economic benefits or service potential embodied in the asset is required to be consumed by the recipient as specified or future economic benefits or service potential must be returned to the transferor.

Control of an asset arise when the municipality can use or otherwise benefit from the asset

in pursuit of its objectives and can exclude or otherwise regulate the access of others to that benefit.

Exchange transactions are transactions in which one entity receives assets or services, or has liabilities extinguished, and directly gives approximately equal value (primarily in the form of cash, goods, services, or use of assets) to another entity in exchange. Fines are economic benefits or service potential received or receivable by entities, as determined by a court or other law enforcement body, as a consequence of the breach of laws or regulations.

Non-exchange transactions are transactions that are not exchange transactions. In a nonexchange transaction, an municipality either receives value from another municipality without directly giving approximately equal value in exchange, or gives value to another municipality without directly receiving approximately equal value in exchange.

Restrictions on transferred assets are stipulations that limit or direct the purposes for which a transferred asset may be used, but do not specify that future economic benefits or service potential is required to be returned to the transferror if not deployed as specified. Stipulations on transferred assets are terms in laws or regulation, or a binding arrangement, imposed upon the use of a transferred asset by entities external to the reporting municipality. Taxes are economic benefits or service potential compulsorily paid or payable to entities, in accordance with laws and or regulations, established to provide revenue to government. Taxes do not include fines or other penalties imposed for breaches of the law. Transfers are inflows of future economic benefits or service potential from non-exchange transactions, other than taxes.

Recognition

An inflow of resources from a non-exchange transaction recognised as an asset is recognised as revenue, except to the extent that a liability is also recognised in respect of the same inflow.

As the municipality satisfies a present obligation recognised as a liability in respect of an inflow of resources from a non-exchange transaction recognised as an asset, it reduces the carrying amount of the liability recognised and recognises an amount of revenue equal to that reduction.

Measurement

Revenue from a non-exchange transaction is measured at the amount of the increase in net assets recognised by the municipality. When, as a result of a non-exchange transaction, the municipality recognises an asset, it also recognises revenue equivalent to the amount of the asset measured at its fair value as at the date of acquisition, unless it is also required to recognise a liability. Where a liability is required to be recognised it will be measured as the best estimate of the amount required to settle the obligation at the reporting date, and the amount of the increase in net assets, if any, recognised as revenue. When a liability is subsequently reduced, because the taxable event occurs or a condition is satisfied, the amount of the reduction in the liability is recognised as revenue.

Transfers

Apart from Services in kind, which are not recognised, the municipality recognises an asset in respect of transfers when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset. The municipality recognises an asset in respect of transfers when the transferred resources meet the definition of an asset and satisfy the criteria for recognition as an asset. Transferred assets are measured at their fair value as at the date of acquisition.

Fines

Fines are recognised as revenue when the receivable meets the definition of an asset and satisfies the criteria for recognition as an asset. Assets arising from fines are measured at the best estimate of the inflow of resources to the municipality. Where the municipality collects fines in the capacity of an agent, the fine will not be revenue of the collecting entity.

Bequests

Bequests that satisfy the definition of an asset are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the municipality, and the fair value of the assets can be measured reliably.

Gifts and donations, including goods in-kind

Gifts and donations, including goods in kind, are recognised as assets and revenue when it is probable that the future economic benefits or service potential will flow to the municipality and the fair value of the assets can be measured reliably.

1.14 Conditional Grants and receipts

Revenue received from conditional grants, donations and funding are recognised as revenue to the extent that the municipality has complied with any of the criteria, conditions or obligations embodied in the agreement. To the extent that the criteria, conditions or obligations have not been met a liability is recognised.

1.15 Provisions and contingencies

Provisions are recognised when:

- → the municipality has a present obligation as a result of a past event;
- → it is probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation; and
- \rightarrow a reliable estimate can be made of the obligation.

The amount of a provision is the best estimate of the expenditure expected to be required to settle the present obligation at the reporting date. Where the effect of time value of money is material, the amount of a provision is the present value of the expenditures expected to be required to settle the obligation. The discount rate is a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the liability.

Where some or all of the expenditure required to settle a provision is expected to be reimbursed by another party, the reimbursement is recognised when, and only when, it is virtually certain that reimbursement will be received if the municipality settles the obligation. The reimbursement is treated as a separate asset. The amount recognised for the reimbursement does not exceed the amount of the provision.

Provisions are reviewed at each reporting date and adjusted to reflect the current best estimate. Provisions are reversed if it is no longer probable that an outflow of resources embodying economic benefits or service potential will be required, to settle the obligation. Where discounting is used, the carrying amount of a provision increases in each period to reflect the passage of time. This increase is recognised as an interest expense. A provision is used only for expenditure for which the provision was originally recognised. Provisions are not recognised for future operating deficits.

If an entity has a contract that is onerous, the present obligation (net of recoveries) under the contract is recognised and measured as a provision. No obligation arises as a consequence of the sale or transfer of an operation until the municipality is committed to the sale or transfer, that is, there is a binding agreement.

After their initial recognition contingent liabilities recognised in business combinations that are recognised separately are subsequently measured at the higher of:

 \rightarrow the amount that would be recognised as a provision; and \rightarrow the amount initially recognised less cumulative amortisation.

Contingent assets and contingent liabilities are not recognised. Contingencies are disclosed in note 33

1.16 Unauthorised expenditure

Unauthorised expenditure means:

- \rightarrow overspending of a vote or a main division within a vote;
- → expenditure not in accordance with the purpose of a vote or, in the case of a main division, not in accordance with the purpose of the main division.

All expenditure relating to unauthorised expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

1.17 Irregular expenditure

Irregular expenditure is expenditure that is contrary to the Municipal Finance Management Act (Act No.56 of 2003), the Municipal Systems Act (Act No.32 of 2000), The Public Office Bearers Act (Act No. 20 of 1998) or is in contravention of the Municipality's supply chain management policy. Irregular expenditure excludes unauthorised expenditure.

Irregular expenditure is accounted for as expenditure in the Statement of Financial Performance and where recovered, it is subsequently accounted for as revenue in the Statement of Financial Performance.

1.18 Fruitless and wasteful expenditure

Fruitless expenditure means expenditure which was made in vain and would have been avoided had reasonable care been exercised. All expenditure relating to fruitless and wasteful expenditure is recognised as an expense in the statement of financial performance in the year that the expenditure was incurred. The expenditure is classified in accordance with the nature of the expense, and where recovered, it is subsequently accounted for as revenue in the statement of financial performance.

1.19 Comparative figures

Current year comparatives

Budgeted amounts have been included in the statement of comparison of budget and actual amounts for the current financial year only.

Prior year comparatives

When presentation or classification of items in the annual financial statements is amended, prior period comparative amounts are restated. The nature and reason for the reclassification is disclosed. Where there has been a change in accounting policy in the current year, the adjustment is made retrospectively as far as is practicable, and the prior year comparatives are restated accordingly.

1.20 Leases

A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to ownership. A lease is classified as an operating lease if it does not transfer substantially all the risks and rewards incidental to ownership.

Finance leases – lessee

Finance leases are recognised as assets and liabilities in the statement of financial position at amounts equal to the fair value of the leased property or, if lower, the present value of the minimum lease payments. The corresponding liability to the lessor is included in the statement of financial position as a finance lease obligation.

The discount rate used in calculating the present value of the minimum lease payments is the interest rate implicit in the lease. The lease payments are apportioned between the finance charge and reduction of the outstanding liability. The finance charge is allocated to each period during the lease term so as to produce a constant periodic rate of on the remaining balance of the liability.

Operating leases – lessor

Operating lease income is recognised as an income on a straight-line basis over the lease term. Initial direct costs incurred in negotiating and arranging operating leases are added to the carrying amount of the leased asset and recognised as an expense over the lease term on the same basis as the lease income.

Income for leases is disclosed under revenue in the statement of financial performance.

Operating leases – lessee

Operating lease payments are recognised as an expense on a straight-line basis over the lease term. The difference between the amounts recognised as an expense and the contractual payments are recognised as an operating lease asset. This liability is not discounted.

Any contingent rents are expensed in the period they are incurred.

1.21 Intangible assets

An asset is identified as an intangible asset when it:

. is capable of being separated or divided from an entity and sold, transferred, licensed, rented or exchanged, either individually or together with a related contract, assets or liability; or

. arises from contractual rights or other legal rights, regardless whether those rights are transferable or separate from the municipality or from other rights and obligations.

An intangible asset is recognised when:

- → it is probable that the expected future economic benefits that are attributable to the asset will flow to the entity; and
- \rightarrow the cost of the asset can be measured reliably.

Intangible assets are initially recognised at cost.

An intangible asset acquired at no or nominal cost, the cost shall be its fair value as at the date of acquisition.

Expenditure on research (or on the research phase of an internal project) is recognised as an expense when it is incurred. An intangible asset arising from development (or from the development phase of an internal project) is recognised when:

- → it is technically feasible to complete the asset so that it will be available for use or sale.
- \rightarrow there is an intention to complete and use or sell it.
- \rightarrow there is an ability to use or sell it.
- \rightarrow it will generate probable future economic benefits.
- → there are available technical, financial and other resources to complete the development and to use or sell the asset.
- → the expenditure attributable to the asset during its development can be measured reliably.

Intangible assets are carried at cost less any accumulated amortisation and any impairment losses. An intangible asset is regarded as having an indefinite useful life when, based on all relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash inflows. Amortisation is not provided for these property, plant and equipment. For all other intangible assets amortisation is provided on a straight line basis over their useful life.

The amortisation period and the amortisation method for intangible assets are reviewed every period-end. Reassessing the useful life of an intangible asset with a definite useful life after it was classified as indefinite is an indicator that the asset may be impaired. As a result the asset is tested for impairment and the remaining carrying amount is amortised over its useful life.

Internally generated brands, mastheads, publishing titles, customer lists and items similar in

substance are not recognised as intangible assets.

Amortisation is provided to write down the intangible assets, on a straight line basis, to their residual values as follows:

Computer software, internally generated 3 - 5 years Computer software, other 3 - 5 years

Amortisation begins when the asset is available for use.

Intangible assets are derecognised:

- → on disposal; or
- → when no future economic benefits or service potential are expected from its use or disposal.

1.22 Non-current assets held for sale

Non-current assets are classified as "held for sale assets" if their carrying amount will be recovered through a sale transaction rather than through continuing use. This condition is regarded as met only when the sale is highly probable and the asset is available for immediate sale in its present condition. Management must be committed to the sale, which should be expected to qualify for recognition as a completed sale within one year from the date of classification.

Non-current assets held for sale are measured at the lower of its carrying amount and fair value less costs to sell. A non-current asset is depreciated (or amortised) while it is classified as a "held for sale" asset.

Interest and other expenses attributable to the liabilities of the "held for sale assets" are recognised in surplus or deficit.

1.23 Impairment of cash-generating assets

Cash-generating assets are those assets held by the municipality with the primary objective of generating a commercial return. When an asset is deployed in a manner consistent with that adopted by a profit-orientated entity, it generates a commercial return.

The entity tests for impairment where there is an indication that an asset may be impaired. An assessment of whether there is an indication of possible impairment is done at each reporting date. Where the carrying amount of an item of property, plant and equipment is greater than the estimated recoverable amount (or recoverable service amount), it is written down immediately to its recoverable amount (or recoverable service amount) and an impairment loss is charged to the Statement of Financial Performance.

Where items of property, plant and equipment have been impaired, the carrying value is adjusted by the impairment loss, which is recognised as an expense in the Statement of Financial Performance in the period that the impairment is identified.

An impairment is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined had no impairment been recognised. A reversal of the impairment is recognised in the Statement of Financial Performance.

Identification

When the carrying amount of a cash-generating asset exceeds its recoverable amount, it is impaired. The municipality assesses at each reporting date whether there is any indication that a cash-generating asset may be impaired. If any such indication exists, the municipality estimates the recoverable amount of the asset.

Cash-generating units

If there is any indication that an asset may be impaired, the recoverable amount is estimated for the individual asset. If it is not possible to estimate the recoverable amount of the individual asset, the municipality determines the recoverable amount of the cash-generating

unit to which the asset belongs (the asset's cash-generating unit).

The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other cash-generating assets of the unit. Where a non-cash-generating asset contributes to a cash-generating unit, a proportion of the carrying amount of that noncash-generating asset is allocated to the carrying amount of the cash-generating unit prior to estimation of the recoverable amount of the cash-generating unit.

Reversal of impairment loss

The municipality assess at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a cash-generating asset may no longer exist or may have decreased. If any such indication exists, the entity estimates the recoverable amount of that asset.

Re-designation

The re-designation of assets from a cash-generating asset to a non-cash-generating asset or from a non-cash-generating asset to a cash-generating asset only occur when there is clear evidence that such a re-designation is appropriate.

1.24 Impairment of non-cash-generating assets

Non-cash-generating assets are assets other than cash-generating assets.

The entity tests for impairment where there is an indication that an asset may be impaired. An assessment of whether there is an indication of possible impairment is done at each reporting date. In assessing whether there is an indication that an asset may be impaired, management considers both external and internal indicators (sources of information).

Where the carrying amount of an item of property, plant and equipment is greater than the estimated recoverable amount (or recoverable service amount), it is written down immediately to its recoverable amount (or recoverable service amount) and an impairment loss is charged to the Statement of Financial Performance.

Value in use

Value in use of an asset is the present value of the asset's remaining service potential. The present value of the remaining service potential of an asset is determined using the following approach:

Depreciated replacement cost approach

The present value of the remaining service potential of a non-cash-generating asset is determined as the depreciated replacement cost of the asset. The replacement cost of an asset is the cost to replace the asset's gross service potential. This cost is depreciated to reflect the asset in its used condition. An asset may be replaced either through reproduction (replication) of the existing asset or through replacement of its gross service potential. The depreciated replacement cost is measured as the reproduction or replacement cost of the asset, whichever is lower, less accumulated depreciation calculated on the basis of such cost, to reflect the already consumed or expired service potential of the asset.

The replacement cost and reproduction cost of an asset is determined on an "optimised" basis. The rationale is that the municipality would not replace or reproduce the asset with a like asset if the asset to be replaced or reproduced is an overdesigned or overcapacity asset. Overdesigned assets contain features which are unnecessary for the goods or services the asset provides. Overcapacity assets are assets that have a greater capacity than is necessary to meet the demand for goods or services the asset provides. The determination of the replacement cost or reproduction cost of an asset on an optimised basis thus reflects the service potential required of the asset.

Restoration cost approach

Restoration cost is the cost of restoring the service potential of a cash-generating asset to its pre-impaired level. The present value of the remaining service potential of the asset is determined by subtracting the estimated restoration cost of the asset from the current cost of

replacing the remaining service potential of the asset before impairment. The latter cost is determined as the depreciated reproduction or replacement cost of the asset, whichever is lower.

Service units approach

The present value of the remaining service potential of the asset is determined by reducing the current cost of the remaining service potential of the asset before impairment, to conform to the reduced number of service units expected from the asset in its impaired state. The current cost of replacing the remaining service potential of the asset before impairment is determined as the depreciated reproduction or replacement cost of the asset before impairment, whichever is lower.

Recognition and measurement

If the recoverable service amount of a non-cash-generating asset is less than its carrying amount, the carrying amount of the asset is reduced to its recoverable service amount. This reduction is an impairment loss. An impairment loss is recognised immediately in surplus or deficit. Any impairment loss of a re-valued non-cash-generating asset is treated as a revaluation decrease. When the amount estimated for an impairment loss is greater than the carrying amount of the non-cash-generating asset to which it relates, the municipality recognises a liability only to the extent that is a requirement in the Standards of GRAP. After the recognition of an impairment loss, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Reversal of an impairment loss

The municipality assess at each reporting date whether there is any indication that an impairment loss recognised in prior periods for a non-cash-generating asset may no longer exist or may have decreased. If any such indication exists, the municipality estimates the recoverable service amount of that asset.

An impairment loss recognised in prior periods for a non-cash-generating asset is reversed if there has been a change in the estimates used to determine the asset's recoverable service amount since the last impairment loss was recognised. The carrying amount of the asset is increased to its recoverable service amount. The increase is a reversal of an impairment loss. The increased carrying amount of an asset attributable to a reversal of an impairment loss does not exceed the carrying amount that would have been determined (net of depreciation or amortisation) had no impairment loss been recognised for the asset in prior periods.

A reversal of an impairment loss for a non-cash-generating asset is recognised immediately in surplus or deficit. Any reversal of an impairment loss of a revalued non-cash-generating asset is treated as a revaluation increase. After a reversal of an impairment loss is recognised, the depreciation (amortisation) charge for the non-cash-generating asset is adjusted in future periods to allocate the non-cash-generating asset's revised carrying amount, less its residual value (if any), on a systematic basis over its remaining useful life.

Re-designation

The re-designation of assets from a cash-generating asset to a non-cash-generating asset or from a non-cash-generating asset to a cash-generating asset only occur when there is clear evidence that such a re-designation is appropriate.

1.25 Employee benefits

Employee benefits are all forms of consideration given by an entity in exchange for service rendered by employees. A qualifying insurance policy is an insurance policy issued by an insurer that is not a related party (as defined in the Standard of GRAP on Related Party Disclosures) of the reporting entity, if the proceeds of the policy can be used only to pay or fund employee benefits under a defined benefit plan and are not available to the reporting entity's own creditors (even in liquidation) and cannot be paid to the reporting entity, unless either:

- → the proceeds represent surplus assets that are not needed for the policy to meet all the related employee benefit obligations; or
- → the proceeds are returned to the reporting entity to reimburse it for employee benefits already paid.

Termination benefits are employee benefits payable as a result of either:

- → an entity's decision to terminate an employee's employment before the normal retirement date; or
- → an employee's decision to accept voluntary redundancy in exchange for those benefits.

Other long-term employee benefits are employee benefits (other than post-employment benefits and termination benefits) that are not due to be settled within twelve months after the end of the period in which the employees render the related service. Vested employee benefits are employee benefits that are not conditional on future employment. Composite social security programmes are established by legislation and operate as multi-employer plans to provide post-employment benefits as well as to provide benefits that are not consideration in exchange for service rendered by employees.

A constructive obligation is an obligation that derives from an entity's actions where by an established pattern of past practice, published policies or a sufficiently specific current statement, the entity has indicated to other parties that it will accept certain responsibilities and as a result, the entity has created a valid expectation on the part of those other parties that it will discharge those responsibilities.

Short-term employee benefits

Short-term employee benefits are employee benefits (other than termination benefits) that are due to be settled within twelve months after the end of the period in which the employees render the related service.

Short-term employee benefits include items such as:

- → wages, salaries and social security contributions;
- → short-term compensated absences (such as paid annual leave and paid sick leave) where the compensation for the absences is due to be settled within twelve months after the end of the reporting period in which the employees render the related

employee service;

- → bonus, incentive and performance related payments payable within twelve months the end of the reporting period in which the employees render the related service; and
- → non-monetary benefits (for example, medical care, and free or subsidised goods or services such as housing, cars and cell phones) for current employees.

When an employee has rendered service to the entity during a reporting period, the entity recognise the undiscounted amount of short-term employee benefits expected to be paid in exchange for that service:

- → as a liability (accrued expense), after deducting any amount already paid. If the mount already paid exceeds the undiscounted amount of the benefits, the entity recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and
- → as an expense, unless another Standard requires or permits the inclusion of the benefits in the cost of an asset.

The expected cost of compensated absences is recognised as an expense as the employees render services that increase their entitlement or, in the case of non-accumulating absences, when the absence occurs. The entity measure the expected cost of accumulating compensated absences as the additional amount that the entity expects to pay as a result of the unused entitlement that has accumulated at the reporting date. The entity recognise the expected cost of bonus, incentive and performance related

payments when the entity has a present legal or constructive obligation to make such payments as a result of past events and a reliable estimate of the obligation can be made. A present obligation exists when the entity has no realistic alternative but to make the payments.

Post-employment benefits

Post-employment benefits are employee benefits (other than termination benefits) which are payable after the completion of employment. Post-employment benefit plans are formal or informal arrangements under which an entity provides post-employment benefits for one or more employees.

Post-employment benefits: Defined contribution plans

Defined contribution plans are post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a fund) and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods.

When an employee has rendered service to the entity during a reporting period, the entity recognise the contribution payable to a defined contribution plan in exchange for that service:

- → as a liability (accrued expense), after deducting any contribution already paid. If the contribution already paid exceeds the contribution due for service before the reporting date, an entity recognise that excess as an asset (prepaid expense) to the extent that the prepayment will lead to, for example, a reduction in future payments or a cash refund; and
- → as an expense, unless another Standard requires or permits the inclusion of the contribution in the cost of an asset.

Where contributions to a defined contribution plan do not fall due wholly within twelve months after the end of each reporting period in which the employees render the related service, they are discounted. The rate used to discount reflects the time value of money. The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the obligation.

Post-employment benefits: Defined benefit plans

Defined benefit plans are post-employment benefit plans other than defined contribution plans. Actuarial gains and losses comprise experience adjustments (the effects of differences between the previous actuarial assumptions and what has actually occurred) and the effects of changes in actuarial assumptions. In measuring its defined benefit liability the municipality recognise actuarial gains and losses in surplus or deficit in the reporting period in which they occur.

Assets held by a long-term employee benefit fund are assets (other than non-transferable financial instruments issued by the reporting municipality) that are held by an municipality (a fund) that is legally separate from the reporting municipality and exists solely to pay or fund employee benefits and are available to be used only to pay or fund employee benefits, are not available to the reporting municipality's own creditors (even in liquidation), and cannot be returned to the reporting municipality, unless either:

- → the remaining assets of the fund are sufficient to meet all the related employee benefit obligations of the plan or the reporting municipality; or
- → the assets are returned to the reporting municipality to reimburse it for employee benefits already paid.

Current service cost is the increase in the present value of the defined benefit obligation resulting from employee service in the current period. Interest cost is the increase during a period in the present value of a defined benefit obligation which arises because the benefits are one period closer to settlement.

Past service cost is the change in the present value of the defined benefit obligation for employee service in prior periods, resulting in the current period from the introduction of, or

changes to, post-employment benefits or other long-term employee benefits. Past service cost may be either positive (when benefits are introduced or changed so that the present value of the defined benefit obligation increases) or negative (when existing benefits are changed so that the present value of the defined benefit obligation decreases). In measuring its defined benefit liability the entity recognise past service cost as an expense in the reporting period in which the plan is amended.

Plan assets comprise assets held by a long-term employee benefit fund and qualifying insurance policies. The present value of a defined benefit obligation is the present value, without deducting any plan assets, of expected future payments required to settle the obligation resulting from employee service in the current and prior periods.

The return on plan assets is interest, dividends and other revenue derived from the plan assets, together with realised and unrealised gains or losses on the plan assets, less any costs of administering the plan (other than those included in the actuarial assumptions used to measure the defined benefit obligation) and less any tax payable by the plan itself. The entity account not only for its legal obligation under the formal terms of a defined benefit plan, but also for any constructive obligation that arises from the municipality's informal practices. Informal practices give rise to a constructive obligation where the municipality has no realistic alternative but to pay employee benefits. An example of a constructive obligation is where a change in the municipality's informal practices would cause unacceptable damage to its relationship with employees.

The amount recognised as a defined benefit liability is the net total of the following amounts:

- \rightarrow the present value of the defined benefit obligation at the reporting date;
- → minus the fair value at the reporting date of plan assets (if any) out of which the obligations are to be settled directly;
- \rightarrow plus any liability that may arise as a result of a minimum funding requirement

The amount determined as a defined benefit liability may be negative (an asset). The municipality measure the resulting asset at the lower of:

- → the amount determined above; and
- → the present value of any economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan. The present value of these economic benefits is determined using a discount rate which reflects the time value of money.

Any adjustments arising from the limit above is recognised in surplus or deficit.

The municipality determine the present value of defined benefit obligations and the fair value of any plan assets with sufficient regularity such that the amounts recognised in the annual financial statements do not differ materially from the amounts that would be determined at the reporting date. The municipality recognises the net total of the following amounts in surplus or deficit, except to the extent that another Standard requires or permits their inclusion in the cost of an asset:

- \rightarrow current service cost;
- → interest cost;
- \rightarrow the expected return on any plan assets and on any reimbursement rights;
- \rightarrow actuarial gains and losses;
- → past service cost;
- → the effect of any curtailments or settlements; and

→ the effect of applying the limit on a defined benefit asset (negative defined benefit liability)

The municipality uses the Projected Unit Credit Method to determine the present value of its defined benefit obligations and the related current service cost and, where applicable, past service cost. The Projected Unit Credit Method (sometimes known as the accrued benefit method pro-rated on service or as the benefit/years of service method) sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation.

In determining the present value of its defined benefit obligations and the related current

service cost and, where applicable, past service cost, an municipality shall attribute benefit to periods of service under the plan's benefit formula. However, if an employee's service in later years will lead to a materially higher level of benefit than in earlier years, an municipality shall attribute benefit on a straight-line basis from:

- → the date when service by the employee first leads to benefits under the plan (whether or not the benefits are conditional on further service); until
- → the date when further service by the employee will lead to no material amount of further benefits under the plan, other than from further salary increases.

Actuarial valuations are conducted on an annual basis by independent actuaries separately for each plan. The results of the valuation are updated for any material transactions and other material changes in circumstances (including changes in market prices and interest rates) up to the reporting date.

The municipality recognises gains or losses on the curtailment or settlement of a defined benefit plan when the curtailment or settlement occurs. The gain or loss on a curtailment or settlement comprises:

 \rightarrow any resulting change in the present value of the defined benefit obligation; and \rightarrow any resulting change in the fair value of the plan assets.

Before determining the effect of a curtailment or settlement, the municipality re-measure the obligation (and the related plan assets, if any) using current actuarial assumptions (including current market interest rates and other current market prices). When it is virtually certain that another party will reimburse some or all of the expenditure required to settle a defined benefit obligation, the right to reimbursement is recognised as a separate asset. The asset is measured at fair value. In all other respects, the asset is treated in the same way as plan assets. In surplus or deficit, the expense relating to a defined benefit plan is [OR is not] presented as the net of the amount recognised for a reimbursement.

The municipality offsets an asset relating to one plan against a liability relating to another plan when the municipality has a legally enforceable right to use a surplus in one plan to settle obligations under the other plan and intends either to settle the obligations on a net basis, or to realise the surplus in one plan and settle its obligation under the other plan simultaneously.

Actuarial assumptions

Actuarial assumptions are unbiased and mutually compatible.

Financial assumptions are based on market expectations, at the reporting date, for the period over which the obligations are to be settled. The rate used to discount post-employment benefit obligations (both funded and unfunded) reflect the time value of money.

The currency and term of the financial instrument selected to reflect the time value of money is consistent with the currency and estimated term of the post-employment benefit obligations.

Post-employment benefit obligations are measured on a basis that reflects:

- → estimated future salary increases;
- → the benefits set out in the terms of the plan (or resulting from any constructive obligation that goes beyond those terms) at the reporting date; and
- → estimated future changes in the level of any state benefits that affect the benefits payable under a defined benefit plan, if, and only if, either:
- → those changes were enacted before the reporting date; or
- → past history, or other reliable evidence, indicates that those state benefits will change in some predictable manner, for example, in line with future changes in general price levels or general salary levels.

Assumptions about medical costs take account of estimated future changes in the cost of medical services, resulting from both inflation and specific changes in medical costs.

Pension Obligations: The municipality and its employees contribute to 5 different Pension

Funds, of which 3 (The Municipal Employees Pension Fund, Municipal Gratuity Fund and Samwu National Provident Fund) cater for the majority of the staff. The Joint Municipal Pension Fund, Municipal Employees Pension Fund, Municipal Gratuity Fund, Samwu National Provident Fund, and National Fund for Municipal Workers are defined contribution funds.

The schemes are funded through payments to financial consultant companies or trusteeadministered funds, determined by periodic actuarial calculations. The Municipality has both defined benefit and defined contribution plans. A defined benefit plan is a pension plan that defines an amount of pension benefit that an employee will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation. A defined contribution plan is a pension plan under which the Municipality pays fixed contributions into a separate entity. The Municipality has no legal or constructive obligations to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods.

For defined contribution plans, the Municipality pays contributions to publicly or privately administered pension insurance plans on a mandatory, contractual or voluntary basis. The Municipality has no further payment obligations once the contributions have been paid. The contributions are recognized as employee benefit expense when they are due. Prepaid contributions are recognised as an asset to the extent that a cash refund or a reduction in

the future payments is available.

1.26 Investment income

Investment income is recognised on a time-proportion basis using the effective interest method.

1.27 Borrowing costs

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalised as part of the cost of that asset until such time as the asset is ready for its intended use. The amount of borrowing costs eligible for capitalisation is determined as follows:

- → Actual borrowing costs on funds specifically borrowed for the purpose of obtaining a qualifying asset less any investment income on the temporary investment of those borrowings.
- → Weighted average of the borrowing costs applicable to the municipality on funds generally borrowed for the purpose of obtaining a qualifying asset. The borrowing costs capitalised do not exceed the total borrowing costs incurred.

The capitalisation of borrowing costs commences when all the following conditions have been met:

- \rightarrow expenditures for the asset have been incurred;
- → borrowing costs have been incurred; and
- → activities that are necessary to prepare the asset for its intended use or sale are undertaken.

When the carrying amount or the expected ultimate cost of the qualifying asset exceeds its recoverable amount or recoverable service amount or net realisable value, the carrying amount is written down or written off in accordance with the accounting policy on Impairment of Assets as per accounting policy number 1.21. In certain circumstances, the amount of the write-down or write-off is written back in accordance with the same accounting policy.

Capitalisation is suspended during extended periods in which active development is interrupted. Capitalisation ceases when substantially all the activities necessary to prepare the qualifying asset for its intended use or sale are complete. All other borrowing costs are recognised as an expense in the period in which they are incurred.

1.28 Offsetting

Assets, liabilities, revenue and expenses have not been offset except when offsetting is required or permitted by a Standard of GRAP.

1.29 Investments

Where the carrying amount of an investment is greater than the estimated recoverable amount, it is written down immediately to its recoverable amount and an impairment loss is charged to the Statement of Financial Performance.

1.30 Grants in aid

The Polokwane Municipality transfers money to individuals, institutions and organisations. When making these transfers, The Municipality does not: Receive any goods or services directly in return, as would be expected in a purchase or sale transaction Expect to be repaid in future; or Expect a financial return, as would be expected from an investment These transfers are recognised in the financial statements as expenses in the period that the events giving rise to the transfer occurred.

1.31 Presentation of Budget Information in the Financial Statements

The Municipality shall present a comparison of the budget amounts for which it is held publicly accountable and actual amounts either as a separate additional financial statement or as additional budget columns in the financial statements currently presented in accordance with Standards of GRAP. The comparison of budget and actual amounts shall present separately for each level of legislative oversight:

- \rightarrow the approved and final budget amounts;
- \rightarrow the actual amounts on a comparable basis; and
- → by way of note disclosure, an explanation of material differences between the budget for which the entity is held publicly accountable and actual amounts, unless such explanation is included in other public documents issued in conjunction with the financial statements, and a cross reference to those documents is made in the notes.

Where an entity prepares its budget and annual financial statements on a comparable basis, it includes the comparison as an additional column in the primary annual financial statements. Where the budget and annual financial statements are not prepared on a comparable basis, a separate statement is prepared called the 'Statement of Comparison of Budget and Actual Amounts'. This statement compares the budget amounts with the amounts in the annual financial statements adjusted to be comparable to the budget.

A comparable basis means that the budget and annual financial statements:

- \rightarrow are prepared using the same basis of accounting i.e. either cash or accrual;
- → include the same activities and entities;
- → use the same classification system; and
- \rightarrow are prepared for the same period.

2. New standards and interpretations

2.1 Standards and interpretations issued, but not yet effective

The municipality has not applied the following standards and interpretations.

GRAP 18: Segment Reporting - Issued March 2005

Segments are identified by the way in which information is reported to management, both for purposes of assessing performance and making decisions about how future resources will be allocated to the various activities undertaken by the entity. The major classifications of activities identified in budget documentation will usually reflect the segments for which an entity reports information to management.

Segment information is either presented based on service or geographical segments. Service segments relate to a distinguishable component of an entity that provides specific outputs or achieves particular operating objectives that are in line with the entity's overall mission. Geographical segments relate to specific outputs generated, or particular objectives achieved, by an entity within a particular region.

This Standard has been approved by the Board but its effective date has not yet been determined by the Minister of Finance. The effective date indicated is a provisional date and could change depending on the decision of the Minister of Finance.

The effective date of the standard is for years beginning on or after 01 April 2011.

The municipality expects to adopt the standard for the first time in the 2012 annual financial statements. It is unlikely that the standard will have a material impact on the municipality's annual financial statements.

GRAP 20: Related Party – Issued June 2011

Related party relationships exist throughout the public sector, because:

(a) The Municipalities is subject to the overall direction of an executive government or Council and ultimately, parliament, and operate together to achieve the policies of the government

(b) The Municipality conduct activities necessary for the achievement of different parts of their responsibilities and objectives through separate controlled entities, and through entities over which they have significant influence

(c) Public entities enter into transactions with other government entities on a regular Basis, and

(d) Ministers, councillors or other elected or appointed members of the government and other members of management can exert significant influence over the operations of an entity.

The mere existence of related party relationships means that one party can control, jointly control or significantly influence the activities of another party. This provides the opportunity for transactions to occur on a basis that may give one party an advantage at the expense of another. Therefore the disclosure of related party transactions, outstanding balances, and the relationship underlying those transactions is necessary for accountability purposes.

Management could hold positions of responsibility within an entity and therefore members of management will be responsible for the strategic direction and operational management of an entity and are entrusted with significant authority. However, their responsibilities may enable them to influence the benefits of office that flow to them, or their related parties or parties that they represent on the governing body.

Close members of the family of persons related to the entity may influence, or be influenced by them in their transactions with the entity.

Disclosure of related party transactions, outstanding balances, including commitments, and relationships with related parties may affect users' assessments of the financial position and performance of the reporting entity and its ability to deliver agreed services, including assessments of the risks and opportunities facing the entity. This disclosure also ensures that the reporting entity is transparent about its dealings with related parties.

The effective date of the standard is for years beginning on or after 01 April 2013. The municipality does not envisage the adoption of the standard until such time as it becomes applicable to the municipality's operation.

At present the impact of the standard is not material.

GRAP 25: Employee benefits - effective 1 July 2013

The objective of GRAP25 is to prescribe the accounting and disclosure for employee benefits.

The Standard requires a municipality to recognise:

- → a liability when an employee has provided service in exchange for employee benefits to be paid in the future; and
- \rightarrow an expense when an municipality consumes the economic benefits or service

potential arising from service provided by an employee in exchange for employee benefits.

GRAP25 must be applied by an employer in accounting for all employee benefits, except share based payment transactions.

- → Defined contribution plans as post-employment benefit plans under which an municipality pays fixed contributions into a separate entity (a fund) and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods;
- → Defined benefit plans as post-employment benefit plans other than defined contribution plans;
- →3 Multi-employer plans as defined contribution plans (other than state plans and composite social security programmes) or defined benefit plans (other than state plans) that:
- → pool the assets contributed by various entities that are not under common control; and
- → use those assets to provide benefits to employees of more than one entity, on the basis that contribution and benefit levels are determined without regard to the identity of the municipality that employs the employees concerned;
- →Other long-term employee benefits as employee benefits (other than postemployment benefits and termination benefits) that is not due to be settled within twelve months after the end of the period in which the employees render the related service;
- → Post-employment benefits as employee benefits (other than termination benefits) which are payable after the completion of employment;
- → Post-employment benefit plans as formal or informal arrangements under which an municipality provides postemployment benefits for one or more employees;
- → Short-term employee benefits as employee benefits (other than termination benefits) that are due to be settled within twelve months after the end of the period in which the employees render the related service;
- → State plans as plans other than composite social security programmes established by legislation which operate as if they are multi-employer plans for all entities in economic categories laid down in legislation;
- → Termination benefits as employee benefits payable as a result of either: an entity's decision to terminate an employee's employment before the normal retirement date; or

an employee's decision to accept voluntary redundancy in exchange for those benefits;

→ Vested employee benefits as employee benefits that are not conditional on future employment.

The standard states the recognition, measurement and disclosure requirements of:

- → Short-term employee benefits;
- \rightarrow All short-term employee benefits;
- \rightarrow Short-term compensated absences;
- → Bonus, incentive and performance related payments;
- \rightarrow Post-employment benefits: Defined contribution plans;
- → Other long-term employee benefits;
- \rightarrow Termination benefits.

The standard states Post-employment benefits: Distinction between defined contribution plans and defined benefit plans:

- → Multi-employer plans;
- \rightarrow Defined benefit plans where the participating entities are under common control;
- \rightarrow State plans;

- → Composite social security programmes;
- \rightarrow Insured benefits.

The standard states, for Post-employment benefits: Defined benefit plans, the following requirements:

- → Recognition and measurement;
- \rightarrow Presentation;
- → Disclosure;
- \rightarrow Accounting for the constructive obligation;
- → Statement of financial position;
- \rightarrow Asset recognition ceiling;
- →Asset recognition ceiling: When a minimum funding requirement may give rise to a liability;
- → Statement of financial performance.

The standard prescribes recognition and measurement for:

- → Present value of defined benefit obligations and current service cost:
- → Actuarial valuation method;
- \rightarrow Attributing benefits to periods of service;
- → Actuarial assumptions;
- → Actuarial assumptions: Discount rate;
- → Actuarial assumptions: Salaries, benefits and medical costs;
- \rightarrow Actuarial gains and losses;
- → Past service cost.
- →. Plan assets:
- \rightarrow Fair value of plan assets;
- → Reimbursements;
- → Return on plan assets.

The standard also deals with Entity combinations and Curtailments and settlements. This Standard has been approved by the Board but its effective date has not yet been determined by the Minister of Finance. The effective date indicated is a provisional date and could change depending on the decision of the Minister of Finance.

The effective date of the standard is for years beginning on or after 01 April 2011. The municipality expects to adopt the standard for the first time in the 2012 annual financial statements.

It is unlikely that the standard will have a material impact on the municipality's annual financial statements.

"GRAP 105: Transfer of Functions between Entities under Common Control – Issued November 2010"

"The compliance to the standard would have no effect on the present presentation of the Annual Financial Statement. However should in the future it be necessary to transfer functions between entities under common control will the accounting policy be amended to cater for such transfer."

"GRAP 106: Transfer of Function between Entities Not Under Common Control – Issued November 2010"

"The compliance to the standard would have no effect on the present presentation of the Annual Financial Statement. However should in the future it be necessary to transfer functions between entities not under common control will the accounting policy be amended to cater for such transfer."

GRAP 107: Mergers – Issued November 2010

"The compliance to the standard would have no effect on the present presentation of the Annual Financial Statement. However should in the future there be a merger between

entities will the accounting policy be amended to cater for such merger transactions and disclosure."

Infrastructure Assets: All the infrastructure assets were reviewed for impairment. A process was followed whereby impairment meetings was held with the relevant managers. After consideration and review it was decided not to impair the assets. The useful life of the infrastructures were reviewed and where an asset condition was poor or very poor the

remaining useful life was adjusted according to the condition factor.

Noveable assets: During the asset verification movable assets were identified that were not on the asset register. These assets were fair valued using the DRC (Depreciated Replacement Cost) method.

36 RISK MANAGEMENT

36.1 Maximum credit risk exposure

Credit risk consists mainly of cash deposits, cash equivalents and trade debtors. The municipality only deposits cash with major banks with high quality credit standing and limits exposure to any one counter-party.

Trade receivables comprise a widespread customer base. Management evaluates credit risk relating to customers on an ongoing basis. If customers are independently rated, these ratings are used.

Financial assets exposed to credit risk at year end were as follows:

Investment in Banks Trade and other receivables

These balances represent the maximum exposure to credit risk.

36.2 Liquidity risk

The municipality's risk to liquidity is a result of the funds available to cover future commitments. The municipality manages liquidity risk through an ongoing review of future commitments and credit facilities.

Cash flow forecasts are prepared and adequate utilised borrowing facilities are monitored. The table below analyses the municipality's financial liabilities into relevant maturity groupings based on the remaining period at the Statement of Financial Position to the contractual maturity date. The amounts disclosed in the table are the contractual undiscounted cash flows.

Borrowings	298 587 917	334 395 823
Trade and other payables	288 469 461	218 419 045

RATIFICATION OF DEVIATIONS FROM 37 BREACHES IN PROCUREMENT PROCESSES

Prescribed procurement processes were not followed but was approved by the Municipal Manager in terms of delegated powers and in accordance with Supply Chain Management Regulations and Policy. Valid reasons for deviations were recorded in all instances. 2 170 915 10 497 195

38 FINANCE LEASE COMMITMENTS

The municipality future lease commitments on vehicles and their present values are as follows:

	Minimum lease		
	payments	Finance costs	Present value
2013			
Current			
Due within one year	4 422 667	1 923 988	2 498 679
Due between one and five years	26 454 229	5 185 357	21 268 872
	30 876 896	7 109 345	23 767 551
2012			
Due within one year	2 690 373	93 369	2 597 004
Due between one and five years	-	-	-
	2 690 373	93 369	2 597 004

Finance Lease Liabilities relates to Vehicles with lease terms of 5 years. The effective interest rate on Finance Leases is 8.5%. Capitalised Lease Liabilities are secured over the items of vehicles leased.

The management of the municipality is of the opinion that the carrying value of Long-term Liabilities recorded at amortised cost in the Annual Financial Statements approximate their fair values.

46 EMPLOYEE BENEFIT OBLIGATIONS

Defined contribution and benefit plan

The Council provides retirement benefits to employees by contributing to pension and provident Funds Membership of either pension or provident fund is compulsory for all permanent employees.

The municipality and its employees contribute to 7 different Pension Funds, of which 3 (The Municipal Employees Pension Fund, Municipal Gratuity Fund and Samwu National Provident Fund) cater for the majority of the staff. The Joint Municipal Pension Fund, Municipal Employees Pension Fund, Municipal Gratuity Fund ,Samwu National Provident Fund and National Fund for Municipal Workers are defined benefit funds.

The employees of the Council as well as the Council as employer, contribute to municipal pension, retirement and various provident

funds as listed below:

2012

Post-Retirement medical aid contributions

The municipality operates on 7 accredited medical aid schemes, namely Bonitas, Hosmed, Key-Health, LA Health and Samwumed, Resolution Health, and Government Emplyees Medical Scheme. Pensioners may continue on the option they belonged to on the day of their retirement.

The last post-employment health care benefits actuarial valuation in terms of IAS19 was done by ZAQ Consultants and Actuaries for the period ending 30 June 2013.

According to the last valuation did, the accrued liability amount to R 160 387 000 as at 30 June 2013.

A reconciliation of Polokwane accrued liability for the year ending 30 June 2013 is set out below:

Year ended 30 June 2013

Year ended 30 June 2013		
	2013	2012
Opening balance	154 437 733	138 685 875
Service cost	8 127 359	7 441 274
Interest cost	14 239 159	12 702 854
Actual employer benefits payments	-4 754 350	-4 392 179
Expected closing balance Actuarial (gain)/loss -	172 049 901 -11 662 901	154 437 733 0
, lotathar (gain), looo		0
Actual closing balance	160 387 000	154 437 733
The amounts recognised in the statement of financial position are as follows:		
Carrying value		
Present value of the defined benefit obligation-		
Wholly unfunded	(160 387 000)	(154 437 733)
Movements for the year		
Opening balance	(154 437 733)	(138 685 785)
Contributions - Current year	(5 949 267)	(15 751 948)
Closing balance	(160 387 000)	(154 437 733)
Key assumptions used		
The projected unit credit method is used as the standard valuation methodology for the valuation done during the 2012/2013 financial period. Plan assets were valued at current market value as required by IAS19.		
Assumptions used on last valuation on 30 June 2013.		
Discount rates used	7.89%	9.22%
Medical inflation - lower than discount rate	7.14%	7.25%
Net effective discount rate	0.70%	1.83%
Other assumptions; Post retirement mortality PA (90-1) Retirement age 63 years		
Sensitivity analysis		
The impact of a 1% change in the medical aid inflation rate is reflected in the table underneath.		
Sensitivity to medical inflation		
Base	160 387 000	125 178 769
-1%	142 608 000	109 804 000
1%	177 857 000	143 885 000
	480 852 000	378 867 769
The employees of the Council as well as the Council as employer, contribute to municipal medical aids as listed below		
	2013	2012
Bonitas	8 136 892	7 455 198
Hosmed Key Health	4 227 511 9 646 556	3 789 138 9 370 997
Key Health LA Health	9 646 556 2 799 787	9 370 997 2 218 060
Samwumed	2 277 079	1 535 109
Resolution Health	20 213	
Government Employees Medical Scheme	737 050	
Total	27 845 089	24 368 502

47 EVENTS AFTER THE REPORTING PERIOD

The Municipality had a VAT receivable dispute with SARS to the amount of R28 138 512.06 on 30 June 2013 SARS has made a post year payment to the amount of R9 543 009.09 as full and final settlement of the claim The irrecoverable amount of R18 595 502.77 was expensed during the year under review

48 GOING CONCERN

In terms of the accounting standard GRAP 1 paragraphs 27 to 30 the annual financial statements are prepared on a going concern basis. The assumption is based on the fact that the municipality may invoke its power to levy additional rates or taxes to enable the municipality to be considered as a going concern even though the municipality will be operational for extended periods with negative net assets.
